Make the most of your mortar and stucco purchases by working with a company that offers the highest quality products while contributing to green building rating systems such as LEED. Solomon Colors, Inc., has a nationwide network of distributors guaranteeing fast delivery. Bring your project to life by working with our lab services to custom blend, vary color intensity and color match your stucco or grout.

WASTE MANAGEMENT

Mortar packages are designed in pre-portioned packages which have been accurately weighed and measured to meet the requirements of the project while reducing product overages leading to construction waste.

Stucco is packaged in convenient 11lb bags.

SOURCE OF MATERIALS: Pigments are from non-domestic sources and will not contribute to goals related to local or regional product sourcing.

Notice above the difference between the traditional mortar (left portion of image) and integrally colored mortar. Colored mortar enhances the brick patterns creating a richer, more natural appearance.

Mortar and Stucco Color

Greenleaf Environmental Profile

At Solomon Colors the raw materials we utilize are recovered from the tool-making manufacturing process. When you purchase our pigments you know that limited virgin materials have been used to produce the products, meanwhile those scraps will never end up in a landfill. To download our color card please visit our website.
