Since 1927, architects and specifiers have trusted Solomon Colors, Inc., the world’s leader in concrete coloring solutions for their decorative concrete needs. Our company believes in innovation and customer support beyond industry-acceptable standards.

When you specify Solomon Colors, you know you’re specifying the best for your decorative concrete project.
Make an Impact with Solomon Colors Decorative Concrete Products

Create dynamic designs that balance beauty and budget with our line of decorative concrete products. Add integral color to the concrete mix and add a new level of dimension and beauty to indoor and outdoor projects.

Get The Latest Innovations in Color

Our pioneering research for concrete coloring has resulted in two highly unique coloring options: HP ColorFlo® - our next generation liquid pigment - and traditional dry pigment. Both are the highest quality pigments available on the market.

When we talk about quality beyond industry-accepted norms, we mean it. Our colored pigment meets or exceeds the ASTM C979 standard for integral concrete color. We keep our color tolerance at .8 Delta E units, a far more stringent tolerance than the industry standard of 1.5 Delta E units.

We also make storing and pouring convenient - Solomon Colors Integral Colors are packaged in dry 25 lb. white repulpable bags, or as ColorFlo® liquid pigment.

DRY AND LIQUID COLORFLO® INTEGRAL COLORS

Transform gray concrete into a work of art with our integral colors!

Visit our website or call us to request a color chart, or an architectural kit that includes color chips which represent shades of Integral Colors based on 94 lbs gray Type I-II portland cement with 4" slump. Shade variations of cement, cement replacements, and aggregate, plus variations in the volume of water, the addition of admixtures and other additives may have an effect on the design mix and final color. When architectural finishes call for the aggregate to be exposed, shade variations of rock and sand can also affect the final overall appearance of the color. We recommend a test slab be poured and approved before starting the job.
