

## Mountain Skatepark

## Mountain Skatepark

Structure Type: Skatepark  
Project Type: Commercial  
Location: Denver, CO  
Products: Concrete Dimensions  
DAY1 Finishing Aid

**Overview:** Skateparks need to have smooth concrete to ensure skaters have an enjoyable and safe experience. In dry climates—especially those that experience freeze thaw—this can be difficult to achieve.

Concrete finishers on this skatepark used DAY1 Finishing Aid to make finishing a stiff mix easier and create a smoother surface. DAY1 also densified the concrete, helping it resist the negative effects of freeze thaw and keeping the surface in good condition.

A Colorado state flag Concrete Dimensions stencil was created for this project. The stencil was embedded in the concrete on one of the ramps during finishing. It was later grouted in for maintain a smooth surface. This will create a permanent pattern in the concrete and represent local pride for decades to come!
