

Polished Coffee Shop

Polished Coffee Shop

Structure Type: Restaurant Floor

Project Type: Commercial

Location: Nanjing, China

Products: Lythic Densifier
Lythic Protector

Overview: This international premium coffee chain is making inroads into the Chinese market. In doing so, it is imperative they put their best foot forward. They must bring their café concept to a vastly different culture and present an appealing environment. This must be balanced with the practical concerns of construction speed, cost, and maintenance.

Polished concrete using Lythic colloidal silica technology fulfills all of these needs. Polished concrete is a durable and easy to maintain surface that can be specified for contemporary aesthetic. Using Lythic improves construction speed and reduces environmental impact versus traditional polishing chemicals.
