

Rail Underpass

Rail Underpass

Structure Type: Underpass Bridge

Project Type: Public

Location: Springfield, IL

Products: Cem-Coat

Overview: Infrastructure does not have to be drab. These two underpasses were built as part of a high speed rail expansion project. To avoid creating an ugly gray mass, color accents were added. After the first underpass, the city decided to use Cem-Coat on subsequent phases.

Concrete panels and cast walls were colored a brilliant blue using Cem-Coat. While Cem-Coat can be sprayed, the contractor brushed and rolled it on this project for more precise application. In this case, Cem-Coat was used as a durable alternative to paint but more cost effective than integral pigments. Unlike paint, Cem-Coat should last for years and decades to come.
